Q4. Write a query to find the number of employees who have been with the company for more than 5 years and who have received a salary increase of more than 10% compared to their initial salary. Consider only employees who have received at least one salary increase. Assume that the salary increase is recorded in the salary_history table with a new_salary column representing the salary after the increase.

Q5. Write a query to find the top 3 most frequently ordered products in each category, along with the total quantity ordered and the total revenue generated. Consider only orders that have been delivered.

Q6. Write a query to find the customers who have placed orders in more than 3 different categories, along with the total number of orders and the total amount spent by each customer.

Q7. Write a query to find the average time taken to deliver orders for each shipping method, along with the minimum and maximum delivery time. Consider only orders that have been delivered.

Q8. Write a query to find the top 5 most profitable products, considering the total revenue generated minus the total cost of goods sold. Consider only orders that have been delivered.

Q9. Write a query to find the customers who have placed orders in more than 3 different categories, along with the total number of orders and the total amount spent by each customer.

Q10. Write a query to find the average time taken to deliver orders for each shipping method, along with the minimum and maximum delivery time. Consider only orders that have been delivered.

Q11. Write a query to find the top 5 most profitable products, considering the total revenue generated minus the total cost of goods sold. Consider only orders that have been delivered.

Q12. Write a query to find the top 3 most frequently ordered products in each category, along with the total quantity ordered and the total revenue generated. Consider only orders that have been delivered.

Q13. Write a query to find the customers who have placed orders in more than 3 different categories, along with the total number of orders and the total amount spent by each customer.

Q14. Write a query to find the average time taken to deliver orders for each shipping method, along with the minimum and maximum delivery time. Consider only orders that have been delivered.

Q15. Write a query to find the top 5 most profitable products, considering the total revenue generated minus the total cost of goods sold. Consider only orders that have been delivered.

Q16. Write a query to find the top 3 most frequently ordered products in each category, along with the total quantity ordered and the total revenue generated. Consider only orders that have been delivered.

Q17. Write a query to find the customers who have placed orders in more than 3 different categories, along with the total number of orders and the total amount spent by each customer.

Q18. Write a query to find the average time taken to deliver orders for each shipping method, along with the minimum and maximum delivery time. Consider only orders that have been delivered.

Q19. Write a query to find the top 5 most profitable products, considering the total revenue generated minus the total cost of goods sold. Consider only orders that have been delivered.

Q20. Write a query to find the top 3 most frequently ordered products in each category, along with the total quantity ordered and the total revenue generated. Consider only orders that have been delivered.

Q21. Write a query to find the customers who have placed orders in more than 3 different categories, along with the total number of orders and the total amount spent by each customer.

Q22. Write a query to find the average time taken to deliver orders for each shipping method, along with the minimum and maximum delivery time. Consider only orders that have been delivered.

Q23. Write a query to find the top 5 most profitable products, considering the total revenue generated minus the total cost of goods sold. Consider only orders that have been delivered.

Q24. Write a query to find the top 3 most frequently ordered products in each category, along with the total quantity ordered and the total revenue generated. Consider only orders that have been delivered.

Q25. Write a query to find the customers who have placed orders in more than 3 different categories, along with the total number of orders and the total amount spent by each customer.

Q26. Write a query to find the average time taken to deliver orders for each shipping method, along with the minimum and maximum delivery time. Consider only orders that have been delivered.

Q27. Write a query to find the top 5 most profitable products, considering the total revenue generated minus the total cost of goods sold. Consider only orders that have been delivered.

Q28. Write a query to find the top 3 most frequently ordered products in each category, along with the total quantity ordered and the total revenue generated. Consider only orders that have been delivered.

Q29. Write a query to find the customers who have placed orders in more than 3 different categories, along with the total number of orders and the total amount spent by each customer.

Q30. Write a query to find the average time taken to deliver orders for each shipping method, along with the minimum and maximum delivery time. Consider only orders that have been delivered.

Q31. Write a query to find the top 5 most profitable products, considering the total revenue generated minus the total cost of goods sold. Consider only orders that have been delivered.

Q32. Write a query to find the top 3 most frequently ordered products in each category, along with the total quantity ordered and the total revenue generated. Consider only orders that have been delivered.

Q33. Write a query to find the customers who have placed orders in more than 3 different categories, along with the total number of orders and the total amount spent by each customer.

Q34. Write a query to find the average time taken to deliver orders for each shipping method, along with the minimum and maximum delivery time. Consider only orders that have been delivered.

Q35. Write a query to find the top 5 most profitable products, considering the total revenue generated minus the total cost of goods sold. Consider only orders that have been delivered.

Q36. Write a query to find the top 3 most frequently ordered products in each category, along with the total quantity ordered and the total revenue generated. Consider only orders that have been delivered.

Q37. Write a query to find the customers who have placed orders in more than 3 different categories, along with the total number of orders and the total amount spent by each customer.

Q38. Write a query to find the average time taken to deliver orders for each shipping method, along with the minimum and maximum delivery time. Consider only orders that have been delivered.

Q39. Write a query to find the top 5 most profitable products, considering the total revenue generated minus the total cost of goods sold. Consider only orders that have been delivered.

Q40. Write a query to find the top 3 most frequently ordered products in each category, along with the total quantity ordered and the total revenue generated. Consider only orders that have been delivered.

Q41. Write a query to find the customers who have placed orders in more than 3 different categories, along with the total number of orders and the total amount spent by each customer.

Q42. Write a query to find the average time taken to deliver orders for each shipping method, along with the minimum and maximum delivery time. Consider only orders that have been delivered.

Q43. Write a query to find the top 5 most profitable products, considering the total revenue generated minus the total cost of goods sold. Consider only orders that have been delivered.

Q44. Write a query to find the top 3 most frequently ordered products in each category, along with the total quantity ordered and the total revenue generated. Consider only orders that have been delivered.

Q45. Write a query to find the customers who have placed orders in more than 3 different categories, along with the total number of orders and the total amount spent by each customer.

Q46. Write a query to find the average time taken to deliver orders for each shipping method, along with the minimum and maximum delivery time. Consider only orders that have been delivered.

Q47. Write a query to find the top 5 most profitable products, considering the total revenue generated minus the total cost of goods sold. Consider only orders that have been delivered.

Q48. Write a query to find the top 3 most frequently ordered products in each category, along with the total quantity ordered and the total revenue generated. Consider only orders that have been delivered.

Q49. Write a query to find the customers who have placed orders in more than 3 different categories, along with the total number of orders and the total amount spent by each customer.

Q50. Write a query to find the average time taken to deliver orders for each shipping method, along with the minimum and maximum delivery time. Consider only orders that have been delivered.
